

Eyebrow Shaping Aftercare Advice

- Avoid wearing eye make up or perfumed products in the area for at least 6 hours (preferably 8 hours) after eyebrow shaping. Because hair has been removed from the brows, the hair follicle is susceptible to infection unless the area is cared for while it heals.
- Should you experience discomfort or redness (this is normal for some time after treatment but should subside by itself), cleanse the area using a mild antiseptic lotion or witch hazel, applied with a small piece of clean dampened cotton wool and apply an antiseptic soothing lotion, cream or gel with clean, dry cotton wool. Repeat this process approximately every 4 hours.
- To achieve the best results, don't be tempted to tweeze between treatments and return for maintenance every 4-6 weeks.
