

## HUMAN HAIR AFTERCARE ADVICE

### WASHING INSTRUCTIONS

#### **If worn daily wash every 7-10 days**

1. Prior to washing remove all knots and tangles.
2. Fill a bowl or sink with tepid water and a little Pureology Shampoo. Immerse the wig or hairpiece in the water. Rinse. Repeat if desired.
3. Using your hands, smooth through some Pureology Conditioner. Leave this to soak for a few minutes then rinse thoroughly.
4. Wrap in a towel to remove excess water. (This is when you can apply a Pureology mask)
5. Very gently brush your wig or hairpiece. Place on a polyhead or wig stand.
6. At this stage, whilst it is damp, lightly spray on the Pureology Colour Fanatic. Leave to dry naturally overnight. (Alternatively, you can dry your wig/hairpiece with a hairdryer immediately after washing but this is very time consuming)
7. In the morning (once dry) style your wig either using heated appliances or styling products.

#### Heated Appliances:

Human hair is very versatile: it can be blow-dried, straightened, curled, crimped or rolled-up. However, on the blonder shades please do not exceed 140 degrees. Use tools with a temperature gauge. Do not continually apply heat to your human hair, this can cause permanent damage.

### HUMAN HAIR ADVICE & FA-

### Q'S

Use our fantastic Pureology products for prolonged lifespan.

Avoid washing in very hot water.

The expected lifespan for a human hair wig or hairpiece is up to 9 months. These time frames are only approximate and are based on every day wear.

Our Pureology Colour Fanatic and Miracle Filler help ease tangles. Please apply this sparingly a couple of times in between washes.

When brushing Trendco human hair we recommend using a soft brush. Be very gentle brushing your wig/piece when it's wet. We do not advise you sleep in your wig/ hairpiece—it will cut the lifespan by at least half.

Human hair will naturally oxidise resulting in colour fade. This happens within the first few months of exposure to the environment and outdoors. However, the colour can be restored. Should you need to darken your hair, please seek professional advice. Human hair can be tinted darker but not lighter.

All human hair wigs and pieces are hand-tied which allows you to change the parting and hair direction.

All hair naturally tangles at the nape of the neck so it is recommended that long human hair is brushed numerous times a day, from the ends to the roots.

For a thorough condition use a conditioning mask at least once a month.

If you have hair underneath a wig and need more stability, we advise you to use Snap Lok Clips, Kirby Grips or wear a wig cap for extra security. Most wigs/pieces can be secured with Mono Tape if you have complete hair loss.
