

Lash Lift Aftercare Advice

For the first 24 hours:

- Avoid getting your lashes wet.
- Do not apply eye cream around the lash area.
- Avoid touching or rubbing your lashes.

After 24 hours, treat your lashes like you did before your treatment. There is little, or no maintenance required, however, you may wish to consider these two tips:

- Comb through your lashes daily, in an upwards direction.
- You can swim and shower as normal but take care of your lashes by combing them through afterwards.
- You may wish to try a nourishing lotion or conditioning serum to help keep your lashes strong and silky.
