H A I R & B E A U T Y

## Mesh Integration and Crown Volumiser

### PRE-APPLICATION

Wash your hair with clarifying shampoo to get rid of any product build up and do not condition your natural hair as this can cause the system to slip once fitted. Make sure your hair is straight ready for fitting.

### MAINTENANCE

The system may feel strange when first fitted. Tightness and itching are common symptoms and should subside after a few days. Hair integration systems must be maintained and tightened every 4 weeks by your qualified specialist, and removed and re-aligned every 4-6 months. This is absolutely vital to ensure the quality of the hair is kept and no damage is done to your own hair. The top piece of your system has a lifespan of 3-6 months, so will need replacing after this time. Make sure you check all costs with your specialist before going ahead with your system. Your specialist will advise you if you will need to re-tape or re-bond the front of the system between appointments as lifting can sometimes occur after washing or sweating.

### WASHING, DRYING AND STYLING

DO NOT wash your system for the first 3 days after application. Be very careful and gentle with your system when washing. Only use products recommended by your specialist, sulphate and paraben free, or those available from [www.maxwellmelia.co.uk](http://www.maxwellmelia.co.uk) as some other products can cause the hair to become dry and damaged, shortening the lifespan. We do not recommend most hair oils to be placed near the root of the system as these can cause the hair system to slide. Instead, use protein spray or extension boost masks.

Try not to wash the hair more than twice a week as this can cause extra stress to the system. When washing the system, do not rub but gently stroke the products into the hair and rinse. Only apply conditioner from the middle to the ends of the hair and lightly press the moisture out of the extensions with a towel after washing.

You must ensure the hair system is dried completely with a hairdryer. Never let the hair air dry as this can cause matting. You must always style the hair in a loose plait at night to avoid tangling. Heat appliances such as straighteners, hairdryers and curling tongs can be used with heat protection spray but over use may cause breakage.

### BRUSHING AND SEPARATING

Always ensure you use a wide toothed comb, hair extension brush or tangle teaser to prevent the hair system from slipping. Be gentle, especially when wet, and hold the tops of the extensions while brushing. Natural hair sheds every day so it is vital the hair is brushed properly to avoid matting as much as possible. It is still common, however, for matting to occur at the root of your hair where the system is placed. The consultant will remove this before reapplying.

### COLOURING HAIR

We do not recommend you colour or chemically change the hair system. If you would like to change colour, please consult your hair specialist.

### HOLIDAYS, SWIMMING AND SUN BEDS

We do not recommend you go swimming in your system, but if you do—please plait the hair to avoid matting and to keep it as dry as possible. Use a deep conditioning treatment if they do get wet with chlorine or salt water as these can dry out the hair or cause them to become discoloured. UV rays and suncream can fade or discolour and dry out the hair. Wrap the hair in a towel if you use sunbeds often.
